- **mullana** - analog modulation the purpose of a communication system is to transmit information signals
(baseband signals) through a communication channel the term baseband is used to designate the band of
frequencies representing the original signal as delivered by the input transducer **analog communications** -
eced mansoura - analog communications syllabus iii b.tech ece i semester unit-1. introduction to
communication system introduction, orientation introduction to communication system, need for modulation,
amplitude modulation, time domain and frequency domain description, power relations in am wave, square
law modulator, switching **digital communication systems** - **nptel** - topics in digital communications zdigital
communication system advantages and disadvantages zdigital communication system classification
zdigitization of analog signals zdigital transmission systems zdata communication systems zintegrated services

tutorial - tutorialspoint - digital communication 6 the communication that occurs in our day-to-day life is in
the form of signals. these signals, such as sound signals, generally, are analog in nature. when the
communication needs to be established over a distance, then the analog signals are sent through wire, using
different techniques for effective transmission. **digital and analog communication systems, l. w. couch,**
